Scissor Lift – 9 Reasons to Use

A ***Scissor Lift*** is essentially a mobile platform that can raise a person up to certain heights vertically (or straight up) by hydraulics to complete a job like for example lighting work.

1. Scissor Lifts can work in very narrow/tight areas and allow you to reach inaccessible areas. Scissor Lift widths start from 32 inches.
2. Scissor Lifts can reach a variety of heights.
Scissor Lift working heights range from 5.79 mtr (19 ft) to machines in excess of 18.29 mtr (60ft).
3. Scissor Lifts can be used to work indoors and outdoors.
There are battery fuelled scissor lifts for indoor/outdoor use and diesel scissor lifts for outdoor use only.
4. Scissor Lifts can work on a variety of surface types.
For say an indoor marble floor, a rubber tyre scissor lift could be used.
For a building site, a rough terrain scissor lift could be used.
5. Scissor Lifts can allow anywhere from 1 to 7 people to work on them.
Scissor Lift Capacities range from 227 kg (500 lbs) to 1134 kg (2500 lbs).
6. Scissor Lifts are very simple to use, increasing productivity levels.
7. Scissor Lifts can be stationary or mobile, so they can be used for a number of different jobs.
8. When fully retracted, a scissor lift is very easy to store and they do not take up much space.
9. If you have a problem with a scissor lift, spare parts are always readily available from the majority of manufacturers/suppliers.
